116	Automatic Presentation of Numbers [PAND - Pr'ésentation automatique des nombres ]	Kamal Lodaya and Vikram Sharma of IMSc, & Prof. Didier Caucal and Dr. Antoine Meyer from Université Paris-Est et CNRS, Marne-La-Vallée, France and Prof. Christian Delhomme, Prof. Marion Le-Gonidec, from University of Reunion, France	2017-18	Automatic numbers are roughly represented as numbers whose $n$ th bit position is accepted by a DFA. A breakthrough result shows that such numbers are either rational or irrational. We are interested in studying similar properties of numbers accepted by other automatic models, such as PDAs
117	Quantitative analysis of Mitochondrial positioning in <i>C. elegans</i> axons	Varuni Prabhakar along with Gautam Menon, of IMSc, & Sandhya Koushika of TIFR, Mumbai.	2017-18	Working on an image analysis algorithm to process the microscope images, in order to understand how mitochondria are positioned along axons of neurons over the development of the worm.
118	Survey for Pulsars and Fast Transients with the upgraded GMRT - A Pilot Study	20 Members in collaboration & they are affiliated to NCRA-TIFR Pune, IMSc Chennai (Manjari Bagchi) SINP Kolkata, IUCAA Pune, RFI-Bangalore, NISER Bhubaneswar, University of California Berkeley (USA), TIFR Mumbai, ASTRON (The Netherlands), CEA Saclay (France), IIT -Kharagpur, PRL Ahmedabad, and IIT-Roorkee GMRT is operated by NCRA-TIFR, Pune	2017-18	
119	Towards precision pulsar timing with the uGMRT	This is a eight member team from NCRA-TIFR Pune, TIFR Mumbai, IMSc Chennai, and ASTRON (The Netherlands).	2017-18	To test the capacity of upgraded GMRT (uGMRT) to study millisecond pulsars (MSPs), 19 MSPs are being monitored and timed
120	Indian Pulsar Timing Array (InPTA) experiment	Project members are affiliated to NCRA/TIFR Pune, TIFR Mumbai, RAC TIFR Doty, ASTRON (The Netherlands), & IMSc Chennai (Manjari Bagchi, Dhruv Pathak)	2018-19	PTA uses an ensemble of pulsar clocks in an attempt to detect Gravitational Waves (GW) from a stochastic background resulting from a superposition of an ensemble of super-massive black hole binary systems (BSMBH)
121	Indo-U.S Joint R&D Networked Joint Center Programme: Emergence and Re-modeling of force chains in soft and Biological Matter	This project involves partners at Jawaharlal Nehru Centre for Advanced Scientific Research, Bengaluru, India, (Srikanth Sastry), Brandeis University, Waltham, MA, USA, (Bulbul Chakraborty), National Centre for Biological Sciences, Bengaluru, (Madan Rao), Institut z of Mathematical Sciences, Chennai, (Pinaki Chaudhuri) and Northeastern University, Boston, (Dapeng Bi)	2018-19	To pursue theoretical and computational research on the localization of pathways by which stress propagates in disordered, soft matter and biological systems, and their implications for the propagation of dynamical correlations, and information, in these systems, and in the latter context, their implications for biological function

	Max Planck Partner Group in Mathematical Biology		... of IMSc. In collaboration with Prof. F. von Steiger, our partner and host in MPIMS Leipzig	2018-19		We are employing concepts from geometry to develop and apply methods based on edges rather than nodes in graphs for differential or comparative analysis of condition-specific biological networks. We are developing general methods that can compare condition-specific networks (irrespective of their mathematical representation, and thus, will be applicable to labeled or unlabeled graphs, unweighted or weighted graphs, undirected or directed graphs.
